

Own the Grid

decentralized energy trading and profit maximization.

The \$50M Leak (Problem)

Distributed solar assets leak \$50M annually in untapped trading potential.

Fragmented Assets

Solar installations operate in silos, unable to communicate.

No Aggregation

No platform to pool and trade collectively at scale.

Lost Revenue

Missed arbitrage and grid services opportunities are rampant.

Vulnerability to Global Shocks

Global energy prices are tied to volatile oil markets and geopolitical instability. Centralized energy infrastructure is a critical risk to national security and economic stability.

Israel as a Global Lab (Why Here)

Energy Sovereignty & Strategic Resilience

The transition to decentralized green energy is no longer just an environmental goal—it's a strategic necessity. As global oil prices surge and geopolitical tensions rise, energy independence becomes a national security imperative. VPP Solar Club decouples communities from fossil fuel dependency and creates resilient, self-sufficient energy networks.

Regulatory Sandbox

Israel's energy regulator enables innovation

Tech Talent Hub

World-class AI and energy engineers

Proof of Concept

Perfect market to validate before global scale

The AI Switchboard (Product)

Real-time AI-powered energy trading platform that aggregates distributed solar assets and maximizes revenue.

₪0.72/kWh

Global Horizons (Scale)

Phase 1 (Israel)

Validate model and build 50MW portfolio

Phase 2 (EU)

Expand to Germany and Spain

Phase 3 (Global)

US, Australia, and emerging markets

Business Model (Performance Fee)

We profit when our clients profit.

Platform Fee

2% of aggregated asset value annually

Performance Fee

20% of trading profits above baseline

Enterprise Licensing

Custom contracts for large portfolios

Choose Your Path

Select the option that best suits your solar asset ownership status.

 FOR RENTERS

Renters

Zero Hardware, 100% Profit

Ideal for those without direct solar ownership, but with access to solar energy.

- No installation costs
- Instant participation
- Pure profit sharing
- Portable across properties

Choose Your Path

 FOR HOME OWNERS

Home Owners

Maximize Your ROI

Designed for individuals who own solar installations and seek to optimize returns.

- Leverage existing solar
- Higher profit potential
- Full asset control
- Long-term wealth building

The Ask (\$1M-1.5M for R&D and Market Scale)

Accelerate AI development and scale to 100MW portfolio.

\$1M-1.5M

Initial Funding Goal

The Leadership Team

Combining Clinical Systems Thinking with Engineering Precision

Barak Keynan | Founder & CEO

- 20 Years of Clinical Systems Expertise: Deep understanding of complex flows, diagnostics, and maintaining long-term client trust.
- Software Automation & QA Expert: Specialist in building robust, automated testing frameworks and ensuring scalable, bug-free digital infrastructures.
- The Visionary Behind VPP: Bridging the gap between human needs, energy markets, and high-reliability AI-driven trading.

TECHNION-GRADE

Liav Vaknin | CTO

- Technion-Trained Software Engineer: Deep foundation in high-level problem solving, bringing rigorous analytical standards to every architectural challenge.
- Infrastructure & Automation Expert: Specializing in the design of scalable, efficient digital systems that streamline complex workflows into simple, high-impact results.
- Systems Architect & Strategic Thinker: Bridging the gap between advanced technology and real-world applications, ensuring that every line of code serves a larger human purpose.
